

TANDBERG SOLUTIONS

Recording and Streaming

MAXIMIZE THE REACH AND VALUE OF IMPORTANT MESSAGES AND EVENTS

Whether delivering a CEO briefing to an entire organization, facilitating corporate training programs or delivering a distance education course, live presentations are a powerful organizational tool. TANDBERG's Content Server maximizes the impact, reach and value of these messages by streaming live presentations to individuals and recording content for future distribution.

SCALE KNOWLEDGE ACROSS THE ORGANIZATION INSTANTLY

No longer is your message bound by place and time. Recording and streaming content enables organizations to communicate to dispersed individuals and scale knowledge — anytime, anywhere. Content can integrate easily into familiar third party tools — extending the reach and chances that your message will be seen and heard. With the Content Server, existing video investments are fully leveraged and your messages are viewed by more people more often.

RECORD. MANAGE. SHARE.

Recording content is simple. Capture up to five concurrent video calls, including additional media (presentations, documents, dvds) from any standards-based SIP or H.323 videoconferencing system. The TANDBERG Content Server does the rest — transforming the content into a rich multimedia experience.

Stream two of the calls live or make all available for future viewing. Users can browse the Content Server library at their convenience for recorded content and easily download Microsoft Windows Media®, Quicktime® compatible MPEG 4, and RealPlayer® formats. Or for those on the go, download to popular portable devices like the Apple iPod® and Microsoft Zune®.

The Content Server provides centralized control, the most comprehensive browser support in the industry, and wide format video. Users are given a high degree of flexibility and choice in the format of media available, allowing them to share content with a wider audience. Post content to a Web site, send as an attachment in an e-mail, or integrate directly into leading third party applications.

TANDBERG SOLUTIONS

Recording and Streaming

Utilizing the Content Server, organizations can easily create video and multimedia presentations for anytime, on-demand access.
